spotlight on VET

LUXEMBOURG

2016/17
VET in Luxembourg

Luxembourg’s administration is centralised. The Ministry of National Education, Children and Youth is responsible for vocational education and training (VET); higher VET is under the responsibility of the Ministry of Higher Education and Research. The dual system is an important feature of VET at secondary level, with strong links between school- and work-based learning. The 2008 (1) VET reform strengthened links to the labour market and introduced a competence-based, modular approach.

Secondary VET (2) prepares learners for professional life and studies in higher education. Three-year pre-VET programmes provide 12- to 14-year-olds with general and practical knowledge and support in choosing a career. Afterwards, learners have the opportunity to acquire a qualification for a profession through the following programmes:

(a) vocational three-year programmes with apprenticeships at their core, comprising modules of general education and vocational theory and practice, and combining learning at school and in an enterprise under the guidance of a supervisor. Learners can choose between two types of programme that lead to different qualifications:
   (i) the vocational capacity certificate (CCP) attesting that the holder has acquired semi-skilled worker’s skills. This is designed for learners who are less likely to cope with other programmes: on successful completion, they can progress to the second or third year of a vocational aptitude programme in the same field;
   (ii) the vocational aptitude diploma (DAP) certifies learner’s competences as those of a skilled worker. Graduates can progress to the third year of technician or technical programmes or become a master craftsperson. If they complete preparatory modules, they can also pursue higher technical studies;

(b) technician four-year programmes which are school-based and include a job placement of 12 or more weeks; the offer of programmes in apprenticeships has been developed recently. The technician programmes offer in-depth and diversified competences and more general education than DAP programmes. They aim at a high professional level and lead to a technician diploma (DT). Graduates can enrol in the third year of a technical programme or, after completing preparatory modules, pursue higher technical studies;

(c) technical four- to five-year programmes leading to the technical secondary school leaving diploma in administrative and commercial, general technical fields or in health and social care. The curriculum includes general and technical education (theory and advanced practical training). Graduates can enter the labour market or continue with higher education.

At tertiary level, VET is offered as short-cycle (two-year) studies leading to a higher technician certificate (BTS). Depending on the field, graduates can continue with bachelor studies. Professional bachelor programmes include one compulsory semester abroad and enable graduates to enter the labour market or progress to the master degree programmes.

All adults have access to formal and non-formal learning, supported by guidance, regardless of their age, education and employment status. Training leave and other incentives promote continuing VET (CVET) participation. There are financial incentives for companies, such as joint funding arrangements and support for language learning. Training is provided by the State, professional chambers, sectoral organisations, private training centres and other organisations. The public employment service organises vocational training for job-seekers. Non-regulated CVET often does not lead to formal but to sectoral qualifications.

---

(1) Implemented in 2011-14.
(2) Nationally referred to as technical secondary education.
VET in Luxembourg’s education and training system

- General education programmes
- VET programmes
- Programmes combining VET and general education
- Also available to adults (full-, part-time or distance education)
- Officially recognised vocational qualifications
- Qualifications allowing access to the next education level
- Giving access to tertiary education
- WBL: Work-based learning, either at the workplace or a VET institution
- Possible progression routes
  - End of compulsory education (successful completion of 5 years of general and technical programmes lead to an EQF level 3 certificate)
  - Prior VET knowledge may be recognised affecting programme duration
  - Work experience of one year needed to finish master craftsperson studies (either before or during the studies)
  - Entry through validation of adults’ prior learning (formal/informal/non-formal)
- Lower secondary technical programmes end with completion of grade 9 at age 14 as ‘Years in E&T’ start at age four with compulsory early childhood education

Distinctive features of VET

Social partner involvement is a core principle in VET policy. The professional chambers act as independent policy institutes; they are represented in the tripartite advisory committee on vocational training and consulted on VET legislation. The 2008 reform reinforced their role which includes involvement in developing and revising VET programmes. They also accompany enterprises and apprentices through practical training and organise CVET.

Learners have an opportunity to follow cross-border apprenticeship to acquire qualifications that Luxembourg’s education system cannot offer; the number of learners is not always sufficient given the small size of the country. Practical training in a company based in Luxembourg is combined with learning at school in one of the neighbouring countries.

Learner progression to general education or (pre-) VET in secondary education is guided based on their achievements and interests, their parents’ opinion and the view of education staff, including a (pre-) VET representative.

Close ties with neighbouring countries, multilingualism in all spheres of life and the high share of foreign citizens with a mother tongue other than one of the three official languages (German, French and Luxembourgish) have a strong impact on VET. Luxembourg provides more language training than any other country, in terms of both the number of foreign languages learned per student and time spent in learning. Multilingualism is strength but also a challenge: the official language used varies, depending on the type and level of education and training.

Challenges and policy responses

Tackling youth unemployment and investment in skills are high on the policy agenda. Reinforced stakeholder involvement and youth guarantee measures aim to match young people’s skills/qualifications better to labour market demand and target the low-skilled. In line with the Europe 2020 headline targets, national policies focus on keeping the share of early leavers from education and training below 10%. One of the challenges is to ensure education and training equity, irrespective of their origin or socioeconomic status. One of the education ministry’s priorities is to ensure a diversified offer to meet the needs of increasingly heterogeneous target groups.

Implementation of the 2008 VET reform has revealed weaknesses in the system. Bringing about change was difficult: adapting to new realities was challenging for institutions, teachers and students. Amendments to current legislation were developed to fine-tune the reform.

School guidance will be further developed. In accordance with the national framework, each secondary school will adopt its own guidance procedures to support students better in their choices.

To give students better chances in the labour market, the education ministry will expand the apprenticeship offer in vocational and technician programmes.

There is a need for stronger links between the world of education and training and that of work. Emphasis has been put on dovetailing in-company and school-based training phases, and on strengthening on-the-job training requirements. In collaboration with professional chambers, the government promotes implementation of quality assurance in work-based learning. This implies defining the process that will ensure better quality without disrupting doing business.
**Upper secondary students (ISCED 2011 level 3) enrolled in vocational and general programmes**
